

Lead Marketplace Management — How to give Adverton access

Send this guide **ONLY** to clients on a plan that includes the Lead Marketplace Management add-on (\$199/month per platform — Angi, Thumbtack, Networx; bundles available for 2–3 platforms).

What this is for: if you're already paying Angi, Thumbtack, or Networx, Adverton takes those over for you — disputing bad leads (sometimes 30%+ of what they charge), responding to leads in under 5 minutes (the #1 driver of marketplace ROI), and gradually ramping spend down as your own ads pick up the slack. To do that we sign in as you (these platforms don't have proper agency-access systems like Google or Meta do).

Time required: 5–10 minutes per platform.

What you'll need: - Your login email + password for each marketplace you want us to manage. - A way to share that password securely (we'll send you a one-time link — see Step 0).

Step 0 (do this BEFORE anything else) — Share credentials securely

DO NOT email us your password in plain text. DO NOT send via SMS. Both are insecure.

We send you a **one-time-secret link** in your kickoff email — a URL that opens a form where you paste your username + password, click submit, and the link self-destructs after we read it once. Looks like:

```
https://onetimesecret.com/secret/abc123xyz...
```

When prompted, paste: - Username/email for the platform - Password - Optional notes (security questions, 2FA setup details)

Once you submit, we receive the credentials encrypted, and the link can never be opened again — even by us. The credentials only exist in our password manager from that point on.

Why this matters: if you ever stop using Adverton, you change your password on each platform and our access is revoked instantly. Same as if a former employee left. **Never reuse a password across multiple platforms.**

Path A — Angi (formerly Angie's List + HomeAdvisor)

Step 1 — Have your Angi Pro login ready

Login URL: pro.angi.com

If you don't remember your password, click **Forgot password** on the login screen — they email a reset link to the email on the account.

Step 2 — Disable 2FA temporarily (if enabled)

If you have two-factor authentication on your Angi account, **temporarily disable it** so we can sign in without needing your phone every time. Angi Pro → **Account Settings** → **Security** → **Two-factor authentication** → **Off**.

After we set up our own session and validate access, you can re-enable 2FA. We'll let you know.

Step 3 — Send credentials via the one-time-secret link

Step 4 — What we do once we're in

- Pause auto-bidding to stop the bleeding (most contractors don't realize Angi is auto-charging them per lead with no cap).
- Set lead filters to your service area + minimum job size.
- Reply to every new lead within 5 minutes (Angi's algorithm rewards this).
- Dispute any lead that doesn't meet your service criteria — this typically recovers 20–30% of what Angi charges.
- Send you a weekly summary of what we did + how much we saved you.

Path B — Thumbtack

Step 1 — Have your Thumbtack Pro login ready

Login URL: pro.thumbtack.com

Step 2 — Disable 2FA if enabled

Thumbtack Pro → **Settings** → **Account Security** → **Two-factor authentication** → **Off**.

Step 3 — Send credentials via the one-time-secret link

Step 4 — What we do once we're in

- Set up Thumbtack's "Targeting" rules to ONLY accept jobs that fit your trade, area, and price point.
 - Set max weekly budget to prevent surprise charges.
 - Reply to every promising lead within 5 minutes (Thumbtack's "Promote" feature requires this for top placement).
 - Mark "not a fit" on bad leads to train the algorithm.
 - Same weekly summary as Angi.
-

Path C — Networx

Step 1 — Have your Networx Pro login ready

Login URL: pro.networx.com

Step 2 — 2FA

Networx generally doesn't have 2FA enforced on Pro accounts, but check **Account** → **Security** → **2FA** to confirm it's off before sharing credentials.

Step 3 — Send credentials via the one-time-secret link

Step 4 — What we do once we're in

- Set strict service-area boundaries (Networx leads are often outside what you serve).
 - Set a daily lead cap to prevent runaway spend.
 - Reply window: under 5 minutes.
 - Dispute under-qualified leads aggressively (Networx's dispute process recovers 25–35% in our experience).
 - Same weekly summary as the others.
-

What happens next

Once we have access on each platform you've signed up for: - **Day 1:** we audit current settings, pause runaway auto-bids, and tighten lead filters. - **Week 1:** first weekly summary lands in your inbox — leads received, leads disputed (and recovered), money saved, jobs booked. - **Month 1+:** as your own Google ads + GBP + LSA pick up volume, we typically reduce marketplace spend 30–50%. **Long-term goal: get you off marketplaces entirely.** They're a transition tool, not a destination.

Our honest take on lead marketplaces: they're not where great contractors stay. The lead quality is mid, the same lead gets sold to 3–4 of you, and the day you stop paying, the leads stop. Our goal during the first 6 months is to keep them running well so you don't lose volume, while we build YOUR Google presence so you can throttle them down. **By month 9, most of our clients are paying Angi/Thumbtack 50% less than when they started — without losing total lead volume.**

Common issues

"I'm using Angi Leads + Angi Pro Network — which one do I share?" Both, if you have both. They're separate products under the same parent company and have separate logins. Send credentials for each via two different one-time-secret submissions.

"My Thumbtack Pro account is shared with my brother (we're partners) — can I still do this?" Yes. The login is shared anyway. Just confirm with your brother that we'll be in there too. He can keep using it — we don't lock you out, we co-sign.

"What if 2FA can't be turned off on my Angi account?" Some accounts enforce 2FA permanently for trust score. In that case, we set up **Authenticator app sharing** — you and we both add the account to our authenticators using the same QR code at setup time. Email us if Angi forces this.

"Can you also handle HomeAdvisor?" HomeAdvisor merged into Angi in 2022. If you have an HomeAdvisor login, it's now an Angi login — same Path A.

"How do I revoke access if I cancel the add-on?" Just change the password on each platform you'd shared. We get logged out within 24 hours. We also automatically remove the credentials from our system within 15 business days of cancellation per the service agreement.
