

Call Tracking — How it gets set up

Send this guide **ONLY** to clients on a plan that includes the Call Tracking add-on (\$79/month, CallRail-powered).

What this is for: call tracking gives you a tracking number for every ad campaign and source, so you know which dollar drove which call. Almost everything is set up by Adverton — you do one thing: confirm where forwarded calls should land.

Time required: 2 minutes.

What we do (no action from you)

1. Provision a tracking number in your area code via CallRail.
2. Install Dynamic Number Insertion (DNI) on your website — visitors from Google Ads see one number, visitors from Facebook see another, organic visitors see a third. All ring through to you.
3. Tag each tracking number to its source (Google Ads / LSA / Facebook / GBP / direct / referral).
4. Set up call recording (we send you a separate compliance disclaimer for two-party-consent states like California, Florida, Pennsylvania).
5. Add the tracking numbers to Google Ads as conversion sources.

What you do (1 step, 2 minutes)

Step 1 — Confirm the forwarding number

Reply to your kickoff email with the phone number where tracked calls should ring. This is usually your main business line.

Example reply: *"Forward all tracked calls to (305) 555-0100."*

If you have AI Voice Receptionist as another add-on, the forwarding number should be **your AI number, not your direct line** — that way tracked calls also flow through AI.

Step 2 — (Optional) Approve the call recording disclaimer

If you're in a two-party-consent state (California, Connecticut, Florida, Illinois, Maryland, Massachusetts, Montana, Nevada, New Hampshire, Pennsylvania, Washington), every recorded call must start with a recorded disclaimer.

We use this default:

"This call may be recorded for quality and training purposes."

If you want a different wording (e.g., shorter, in Spanish, with your business name), reply to the kickoff email with what you want. Otherwise we use the default.

What happens next

Within 48 hours of you confirming the forwarding number: - Tracking is live on your site, ads, and GBP. - Every call is recorded (you can play back any of them in CallRail or our CRM). - Your monthly report shows: calls per source, qualified vs. spam, average duration, time of day, and conversion rate.

You don't need to log into CallRail unless you want to listen to specific recordings. Everything important surfaces in your monthly report.

Common issues

"My phone has no caller ID anymore — every call shows the tracking number, not the customer's number." This is a known CallRail behavior with some carriers. If your phone shows the tracking number instead of the customer's, we can switch to **call whisper** mode — you hear a quick announcement at pickup ("LSA call from Phoenix") and the customer's real caller ID then comes through. Email us if this matters to you.

"Will customers see the tracking number or my real number?" Customers see whatever number the tracking number is dialing FROM (typically the same area code as your business). They never see the tracking infrastructure. To them it just looks like they called your business and someone picked up.

"What happens to call recordings when I cancel?" Per the service agreement, recordings tied to your account are exported to you (CSV + audio files in a Drive folder we send) within 15 business days of cancellation, then deleted from CallRail.
